

IQ® Country Rotation All World ex-US Index

Fact Sheet: 12/31/2009

Bloomberg Symbol: IQETFAW

Index Strategy

The IQ Country Rotation All World ex-US Index seeks to achieve long-term capital appreciation through exposure, on a rotating basis, to various country equity markets, both developed and emerging markets, outside of the U.S. The strategy's differentiated approach is based on a multi-factor, rules-based methodology that employs valuation, technical and economic factors to select the most attractive foreign equity markets in a manner designed to enhance the risk-adjusted returns of the index. The index invests in equities and seeks to achieve its performance through country selection across both developed and emerging markets. The methodology does not involve asset allocation or individual stock selection.

¹ Statistics are annualized based on monthly returns for period ending as of the date of this fact sheet and are relative to benchmark, as applicable. Source: FactSet, Bloomberg and S&P Custom Index Calculation.

Alpha is a measure of a portfolio's actual excess returns and expected performance, given its level of risk (as measured by Beta).

Sharpe Ratio is a measure of a portfolio's risk-adjusted performance (excess return per unit of risk).

Volatility is a measure of the range of a portfolio's performance, meaning the degree to which it rises above and falls below its average return.

R-Squared is a measure of how closely performance can be explained by the performance of the benchmark index (in this case, how closely performance correlates with the MSCI AC World ex-USA Index).

Beta reflects the sensitivity of a portfolio's return to fluctuations in the market (in this case, as measured by the MSCI AC World ex-USA Index).
